

Commercial buildings

A typology of commercial buildings is closely connected with the historical development of trade. Successful trade requires always central location and thus plays a significant role in the process of urbanization. Cities frequently developed at the intersection of trade routes, river bridging points, fords, in ports for example. The marketplace itself, the central trading venue, thus became the nucleus of civic growth.

History

Ancient period

- market, market-places (open-air, built - bazar, temporary)
location: intersection of roads, rivers, ports - embryo of latter towns
